

META PELETE- Ashaworker

The project brings the entire manual process of work of Asha's worker online. The main purpose of this project is to simplify the process of handling each event by providing a web interface for admin, worker and parents, doctors.

The admin module consists of register each worker and allots each worker to different locations and views the overall work of worker and add panchayath, projects and doctor and it viewing. The worker module consists of register parent have child less than 5 years old, providing baby food, alert vaccination details, date of vaccination, manage the health of both mother and child, add details of diseases etc. The parent module consists view the view the vaccination details, view the details about the nutrition foods, diseases so.

The existing baby care system normally there is no way to alert mothers about vaccination details or food details E.g.: pulse polio vaccination. It is very important for child up to 5years. Also about the food details for children and pregnant. The new Panchayat programs, health center programs and Government schemes are unavailable to public. The Asha worker not bother about new born child's and mothers. There are 4 modules in the system as following admin, worker, mother and doctor.
